

**OXYIONS™ .....****The Earth's Most "Purrrfect" Deodorizer**

There's a new natural odor eater in town and it's declaring war on all ODORS! The Electronic CatMouse™ devours odors and toxic pollutants with Oxyions™ and eventually leaves behind only beneficial, healthy oxygen and ions in the process, just as Nature does everyday! The CatMouse™ meets all regulatory compliance standards.

Thanks to new micro-electronic advances, this powerful commercial grade deodorizing technology is now available in the low cost, miniature electronic CatMouse™...for use by virtually everyone!

Nature already invented the "Purrrfect" miracle deodorizer eons ago...Oxyions™, a natural balance of Activated Oxygen (O3) and negative Ions! Oxyions™ are produced by Nature from sunshine, lightning storms, rain showers and waterfalls for example. Just as in Nature, the electronic CatMouse™ produces Oxyions™, to clean the earth's air supply and environment. Without them, we would likely all die of putrefaction from our planet's pollutants, waste, germs, bacteria, molds, viruses, fungi, etc. Now, YOU can harness nature's miracle, safely, right in your own home, with the same beneficial results!

The CatMouse™ is the "Purrrfect" deodorizer because it completely destroys odors, germs, viruses, bacteria, mold, mildew and most pollutants– and the only remaining byproduct is eventually pure oxygen! Activated Oxygen (O3) quickly starts to revert to pure Oxygen (O2) in about 30 minutes, leaving no toxic residues or pollutants. Nature's Activated Oxygen (O3) has a half-life of about 30 minutes, meaning it reduces itself by half about every 30 minutes. Initial half-life reduction is fast because the concentrated Activated Oxygen (O3) will immediately start attaching itself to pollutants, odors and microorganisms, destroying them in the process. Any "residual Activated Oxygen (O3)" will remain and reduce at a slightly slower pace but still, about every 30 minutes.

The CatMouse™ emits Oxyions™ at the same levels as fresh country air. Actually, fresh clean country air (not polluted city air) can often naturally contain twice the Activated Oxygen (O3) levels as the CatMouse™ produces or government regulations typically allow. Opening your windows to let fresh air into your home could, therefore, exceed regulatory limits! Ridiculous? Yes, once you know the facts. Remember these are the same regulatory government agencies that convinced you to eat Transfats for decades, not realizing they were up to eight times more likely to clog your arteries than natural butter! Hence the famous

comedy line; "I'm from the government and I'm here to help." Their cure is often more harmful than the problem!

In fact, the Activated Oxygen (O3) portion is actually Nature's Miracle disinfectant and deodorizer. It is routinely used commercially to disinfect and deodorize hospitals, commercial kitchens, gyms, hot tubs, drinking water and swimming pools, etc. By law, every bottle of drinking water must be disinfected with it!

Even when dissolved in water, it makes a highly effective and safe disinfectant which is non-toxic, non-staining and works great. Activated Oxygen (O3) is 13 times more soluble in water than Oxygen. Activated Oxygen (O3) disinfects 3,100 times faster than chlorine! Super oxygenated (ozonated) water stays at full strength for only approximately 15 minutes. The Activated Oxygen (O3) then again reverts back to oxygen, leaving no harmful pollutant residuals behind, while having effectively destroyed pathogens (bacteria, viruses, fungi, mold, etc.). Ozonated water is used for safely and instantly cleaning stains from clothes, carpets, upholstery and furniture. It is also effective for sanitizing countertops, vegetables or a multitude of other surfaces.

Activated Oxygen (O3) is also erroneously referred to as ozone. Media ignorance has cast an undeserved negative stigma on nature's environmental purifier by incorrectly naming it as a pollutant. In fact, it is nature's much needed reaction to man made pollutants! It destroys the pollutants, then amazingly reverts back to oxygen and clean air. Ozone alerts are therefore actually pollution alerts! It is nature's response to the need to clean man-made pollutants from our air, not the other way around. Nature's ozone is not the problem– pollution is the problem. Nature's own ozone (air bleach) is the answer to destroying pollution. We couldn't live without it! Just as big Drug Company lobbyists push profitable Drugs (with killing side effects) and undermine Natural Health, big Chemical Company lobbyists push profitable (but toxic) Chemicals and undermine Nature's existing simple, low cost solutions, such as Nature's Ozone (O3).

Activated Oxygen (O3) has been the only viable, long-term method for removing the most difficult odor problems in nature and commercially. Removing smoke, soot and dead animal odors from buildings, automobiles and homes, have all been best accomplished with Activated Oxygen (O3). Only Activated Oxygen (O3) can permeate every crack & crevice and attack and chemically alter the odor causing compounds themselves, rendering them inert, ultimately leaving only fresh Oxygen(O2) when its work is done! It's Nature's Miracle.

If it weren't for the oxidizing power of Nature's Activated Oxygen (O3) in Oxyions™, our entire planet would be, in all probability, one putrefied, smelly, toxic, mess! It's Nature's answer to destroying the Earth's pollutants, and now you can own, control and enjoy the many benefits of Nature's Activated Oxygen (O3) miracle anywhere in your own home, easily and inexpensively! You can destroy odors, toxins, bacteria, germs, viruses, molds and more...naturally, effectively and safely!

**Inexpensive • Compact • Powerful • Safe & Healthy Residual Byproduct**  
**Replaces hundreds of toxic deodorizing & disinfecting**  
**chemical products and expense!**

The CatMouse™ – Nature's own miracle deodorizer is so effective it can de-scent a skunk! If it can do that, and eliminate extremely difficult litter box odors, imagine the hundreds of other uses for this amazing little device in your home! If you can think of it, you can deodorize and disinfect it– with the CatMouse™!

Due to the compact size of the CatMouse™, it is most effective for its designed purpose: cleaning and deodorizing small areas and items. You can treat virtually any object by simply placing the CatMouse™ above, within, or in close proximity to, it. The CatMouse™ can be placed in large plastic storage boxes, garment bags, shoe boxes, pantries, hope chests, garbage cans, diaper pails, even in small closets. It is also very effective on hamper lids and near the laundry chute!  
Activated Oxygen (O3) is heavier than air and therefore flows downward, so placing the CatMouse™ slightly above the object to be treated is beneficial.

### **THE FILTHY FACTS**

*Germs, bacteria and viruses not only threaten us...they can kill!*

*New scientific evidence is emerging pointing to germs as a link to inflammation-causing heart disease, even cancer.*

*The typical office desk area has 400 times the amount of bacteria than the average toilet seat. Worst offenders: phones, staplers, keyboards and your computer mouse! Worldwide, money is the filthiest of all items handled, and your wallet is a virtual breeding petri dish for bacteria. Purses and briefcases are also among the dirtiest, worst offenders. These items are routinely set down on the filthiest surfaces imaginable (like airport toilet floors) and then innocently and unconsciously placed on desks and even kitchen countertops, which you EAT from! No wonder so many people are sick and health care costs are skyrocketing.*
